3 Reasons

Why you should use ReactJS?

Reason 1 Break UI to components

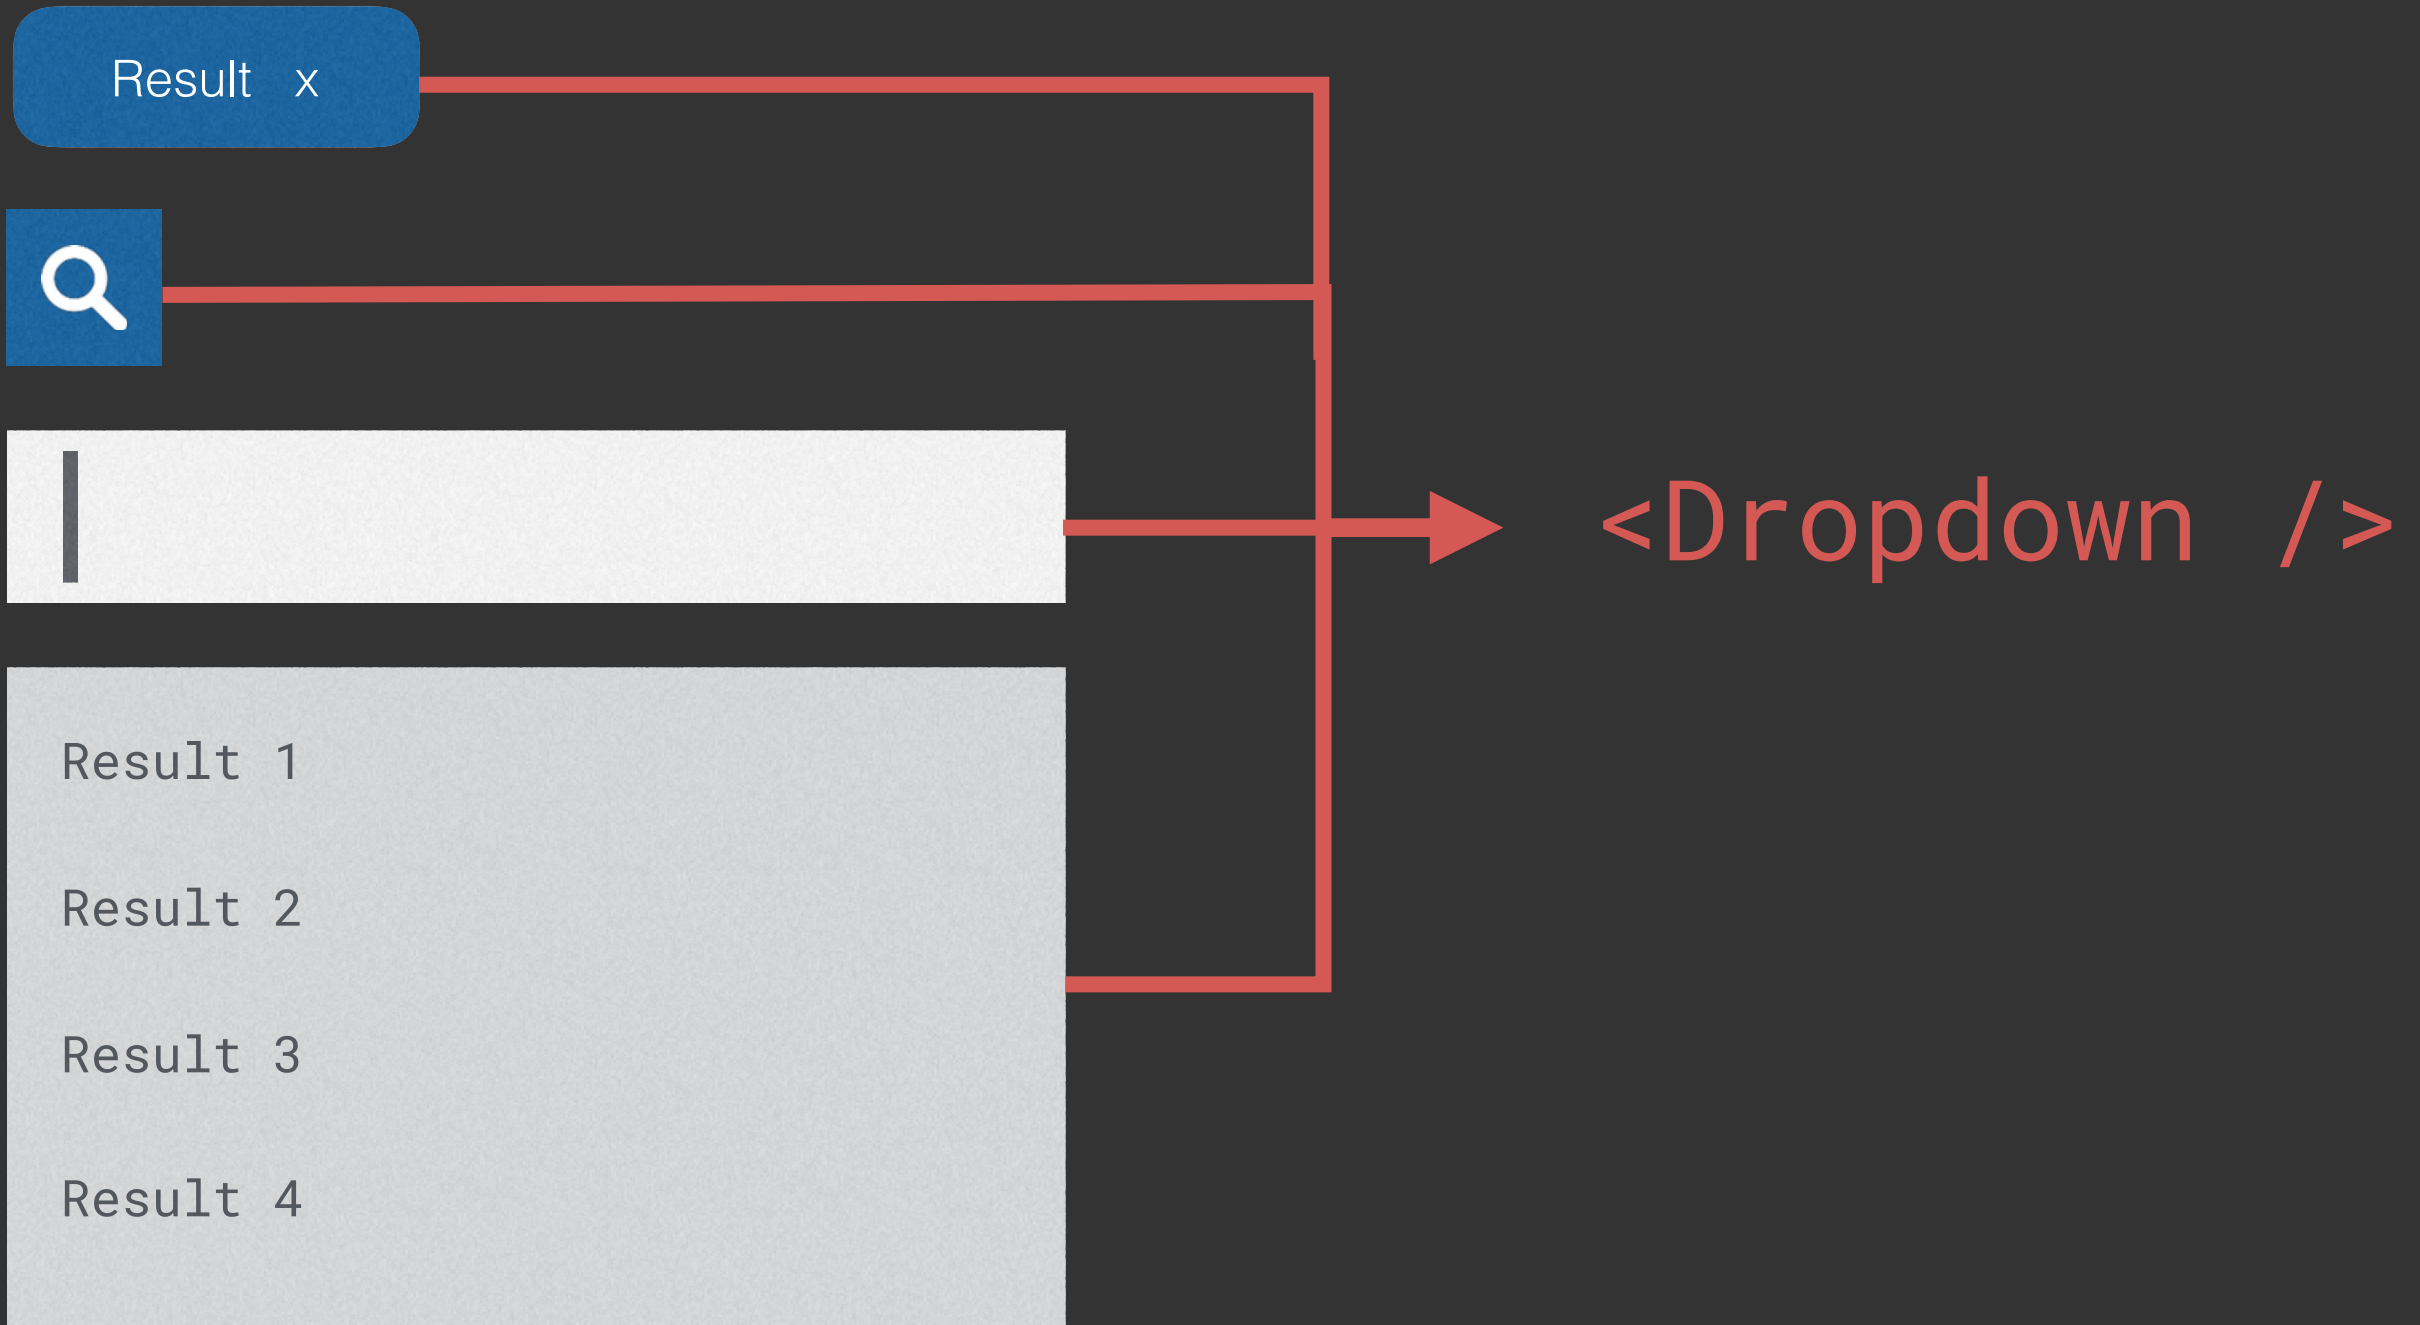

<Dropdown />

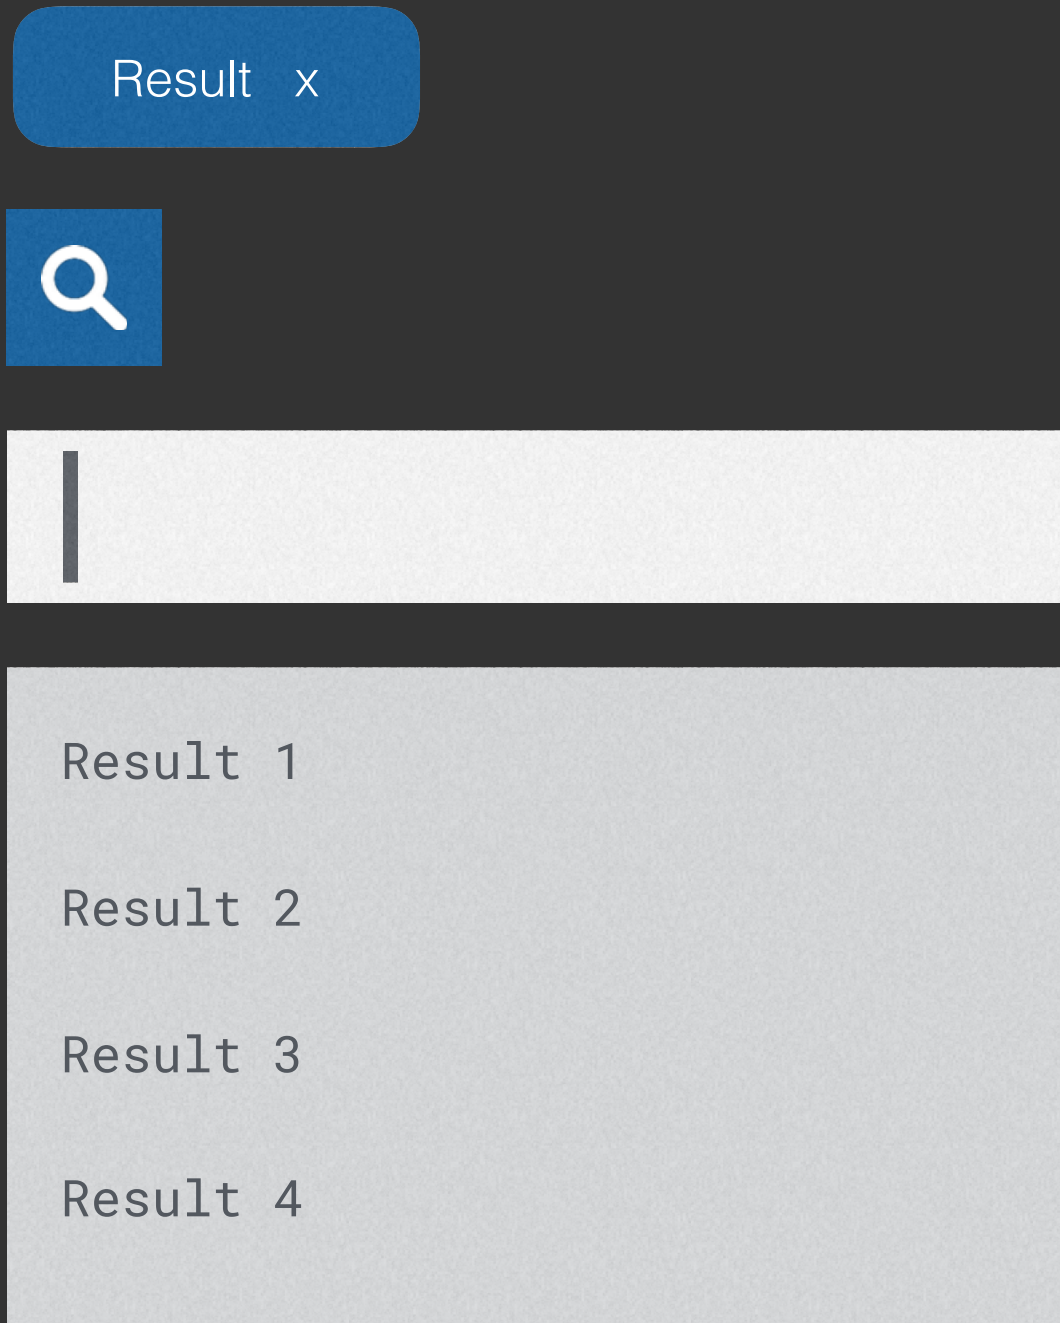

Component

`<Dropdown />`

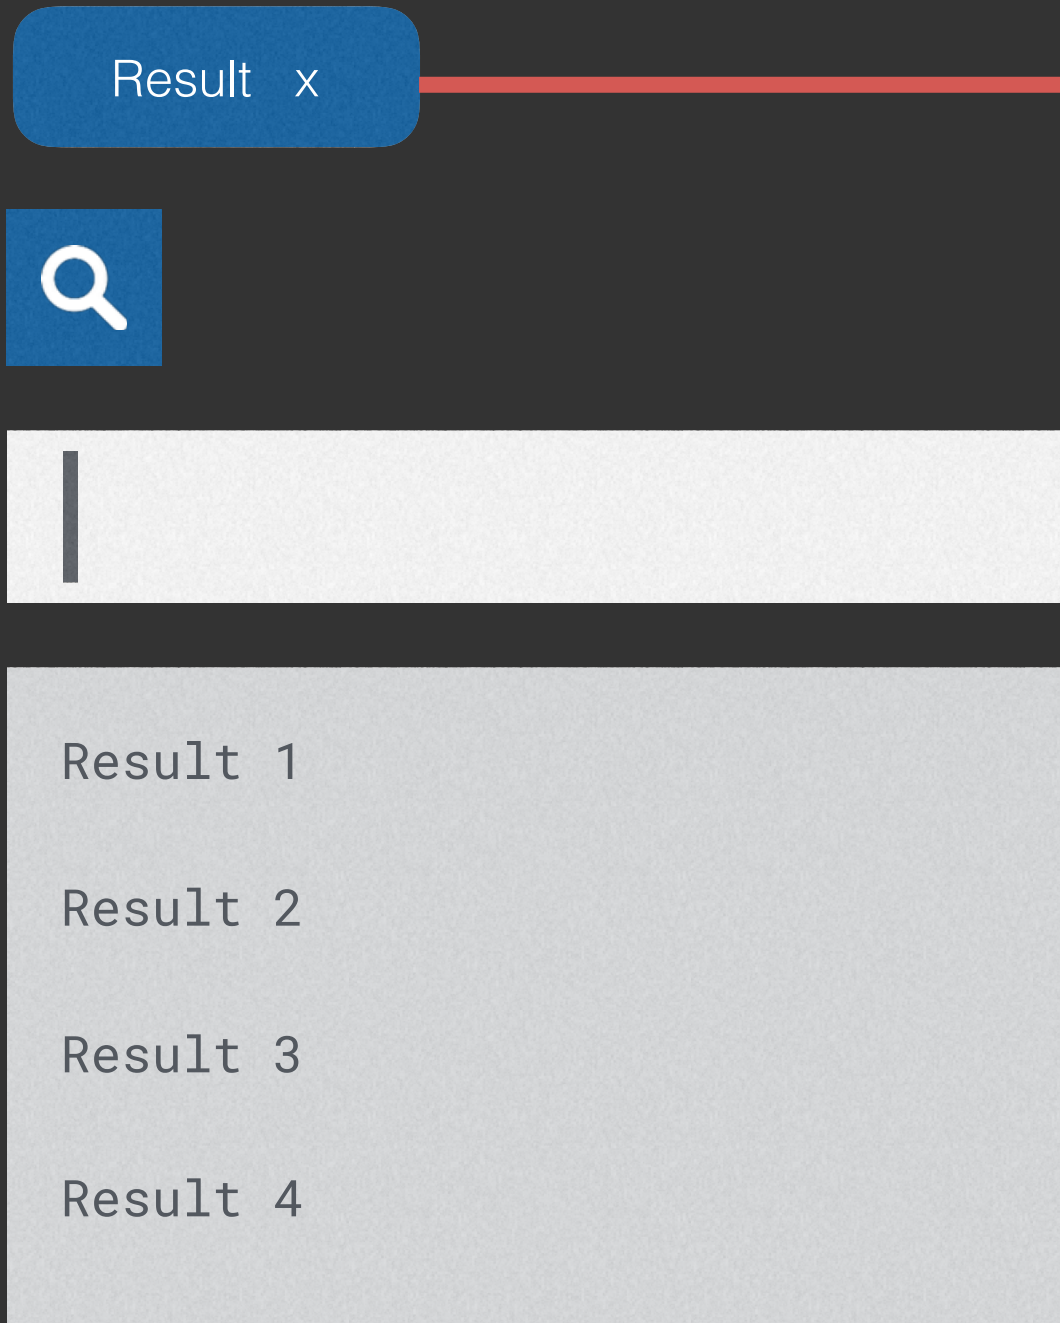

Event

```
<Dropdown onFocus={...}  
onBlur={...}  
onChange={...} />
```

```
<Dropdown onFocus={...}  
onBlur={...}  
onChange={...}  
onKeyPress={...} />
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  onChange={...}  
  onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  onChange={...}  
  onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  onChange={...}  
  onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  onChange={...}  
  onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
onBlur={...}  
onChange={...}  
onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
onBlur={...}  
onChange={...}  
onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
onBlur={...}  
onChange={...}  
onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
onBlur={...}  
onChange={...}  
onKeyPress={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  State onChange={...}  
  onEnter={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  State onChange={...}  
  onEnter={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  State onChange={...}  
  onEnter={...}/>
```

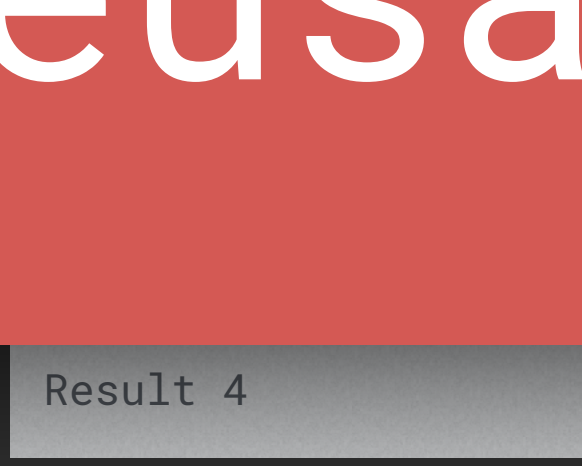

```
<Dropdown onFocus={...}  
  onBlur={...}  
  State onChange={...}  
  onEnter={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  State onChange={...}  
  onEnter={...}/>
```

Reusability

```
onEnter={...}/>
```

```
<Dropdown onFocus={...}  
  onBlur={...}  
  State onChange={...}  
  onEnter={...}/>
```

```

Example

To-do-list

How to create component

```
// Todo.js

import React, { Component } from 'react';

export class Todo extends Component {
  render() {
    return (
      <div></div>
    );
  }
}
```

```
// Todo.js
```

```
import React, { Component } from 'react';
```

```
export class Todo extends Component {
```

```
  render() {
```

```
    return (
```

```
      <div></div>
```

```
    );
```

```
  }
```

```
}
```

```
// Todo.js

import React, { Component } from 'react';

export class Todo extends Component {
  render() {
    return (
      <div>
        <h1>New component</h1>
      </div>
    );
  }
}
```

```
// App.js
import React, { Component } from 'react';
import './App.css';

import {Todo} from './Todo';

class App extends Component {
  render() {
    return (
      <div className="App">
        <Todo />
      </div>
    );
  }
}

export default App;
```

Two blue arrows are present. One arrow points from the right towards the import statement 'import {Todo} from './Todo';'. The second arrow points from the bottom right towards the JSX element '<Todo />'. Both arrows are solid blue lines.

```
// App.js
import React, { Component } from 'react';
import './App.css';
```

```
import {Todo} from './Todo';
```

```
class App extends Component {
  render() {
    return (
      <div className="App">
        <Todo />
      </div>
    );
  }
}
```

```
export default App;
```

```
// Todo.js
import React, { Component
export class Todo extends
  render() {
    return (
      <div></div>
    );
  }
}
```

```
// App.js
import React, { Component } from 'react';
import './App.css';

import {Todo, ComponentName, ...} from './Todo';

class App extends Component {
  render() {
    return (
      <div className="App">
        <Todo />
      </div>
    );
  }
}

export default App;
```

localhost:3000

New component

How to use bootstrap in react project

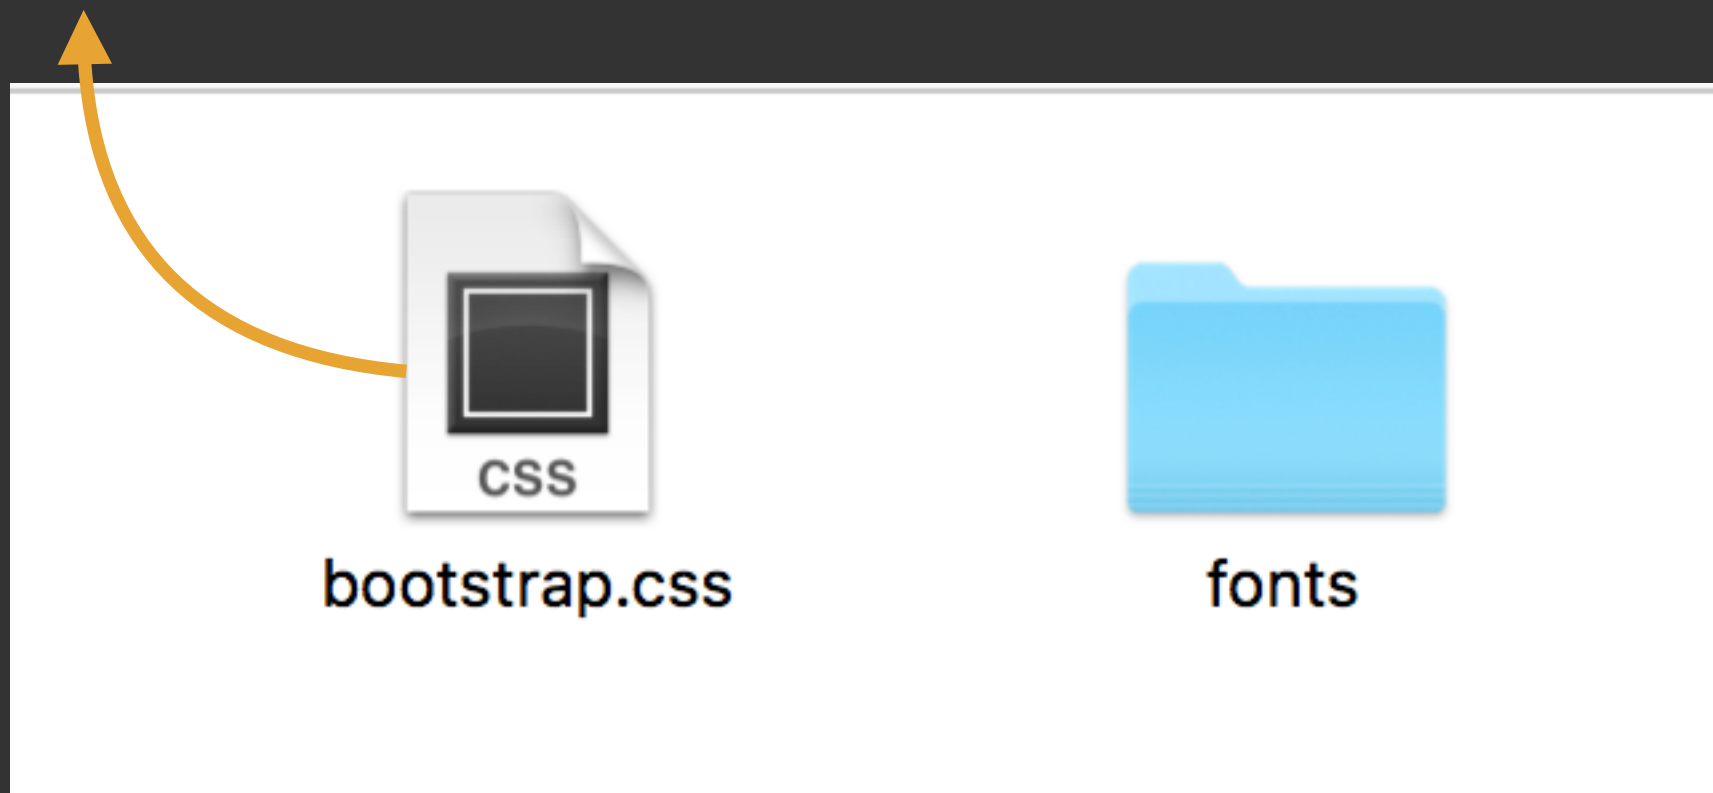

bootstrap.css

fonts

```
// Change path file  
../fonts => ./font
```

```
// Todo.js
```

```
import React, { Component } from 'react';
```

```
import './bootstrap.css';
```

```
import './Todo.css';
```

```
...
```

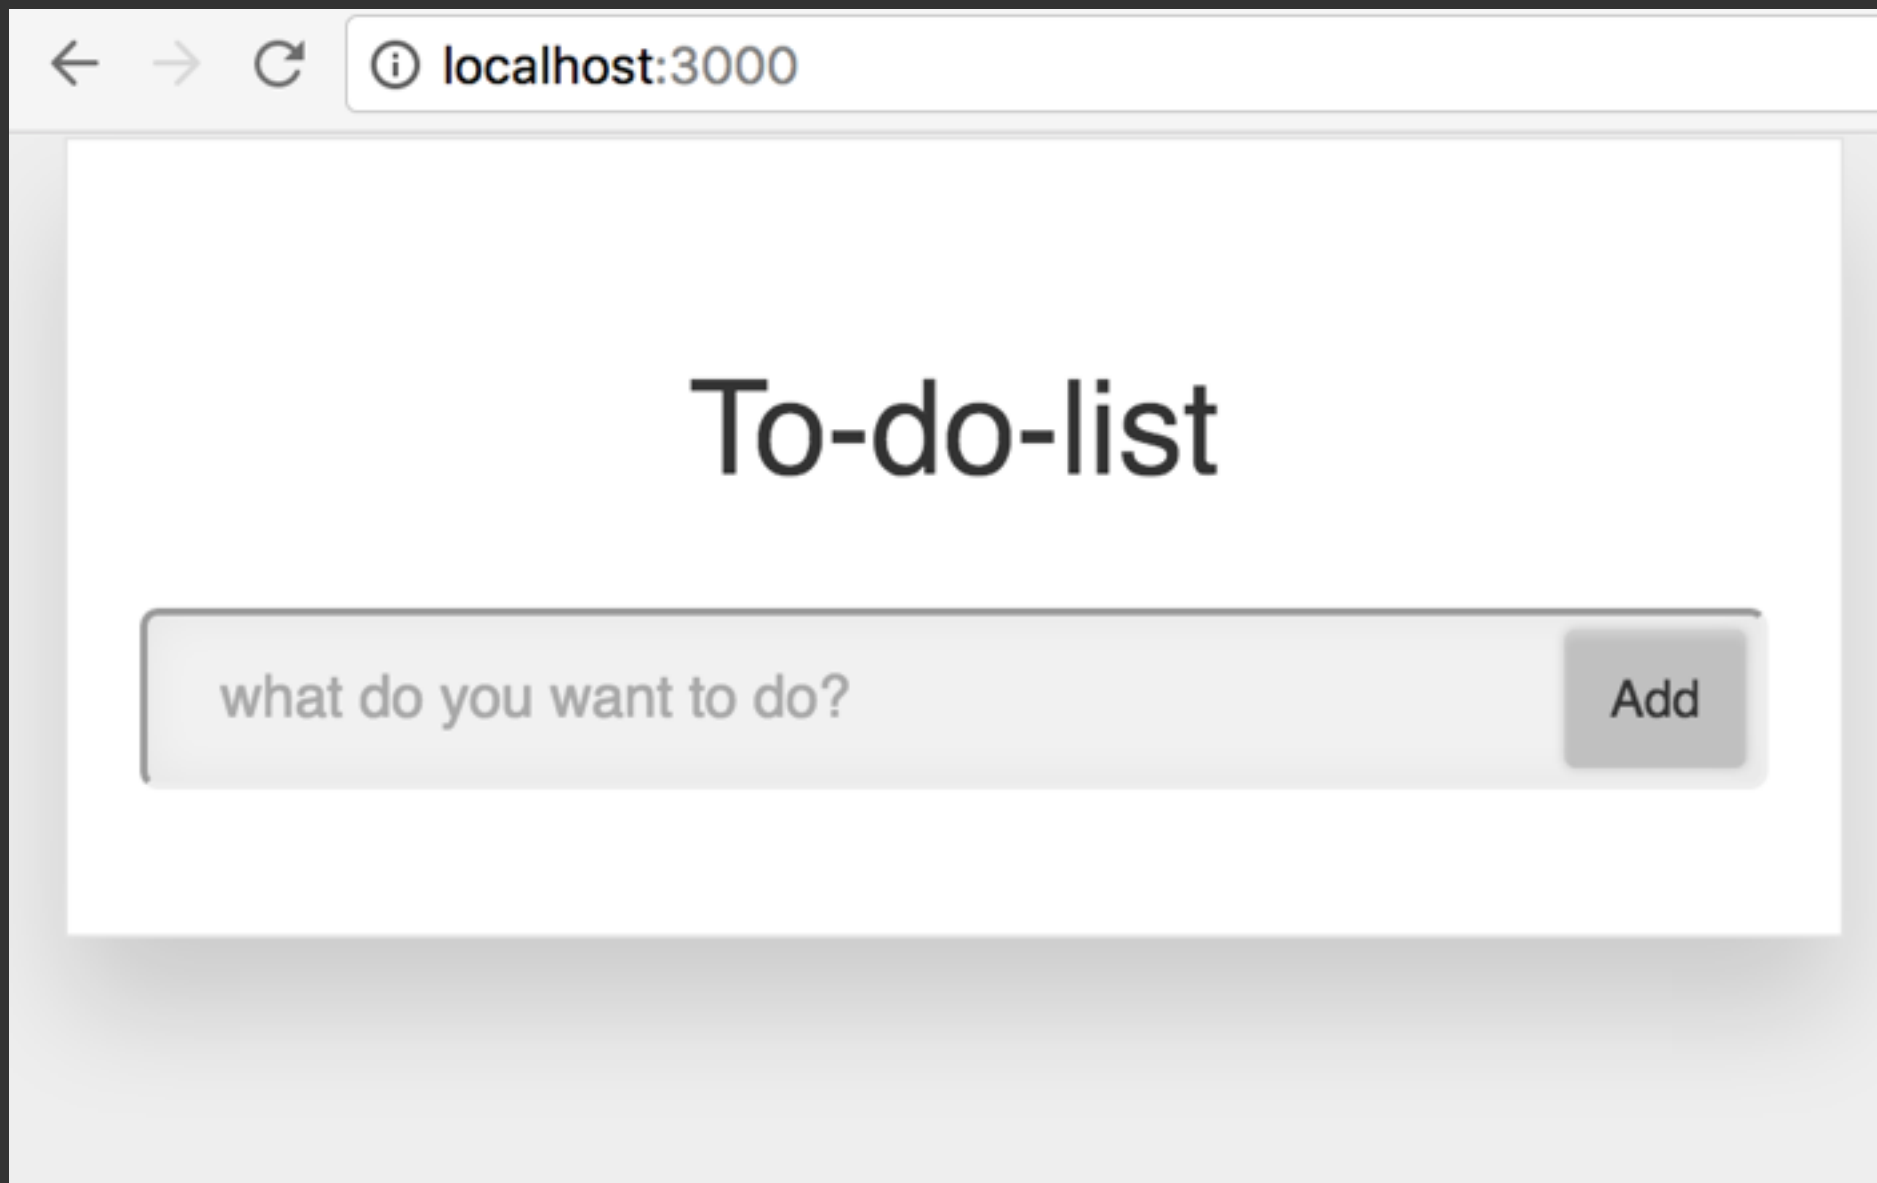

```
// Todo.js
...

export class Todo extends Component {
  render() {
    return (
      <div class="card clearfix">
        <div class="to-do-box">
          <h1 class="title">To-do-list</h1>
          <div class="form-box">
